Software-Connection via API

Connection for your Wealth Management System

With software connections via API (Application Programming Interface), you can easily and securely connect Zürcher Kantonalbank to your software. The connection is made directly in eBanking or eWealth. Zürcher Kantonalbank uses the SIX bLink platform for the API connection.

Your advantages at a glance

Real-time data exchange of portfolio information (positions, transactions)

Order placement on different stock exchanges

Strict data protection
Data is exchanged only with your consent

Automatic processes
Your portfolio management system is automatically updated via a harmonised bank interface

Simple connection
Activation via eBanking or via eWealth
→ high degree of self-service

State-of-the-art technology and secure data transmission

Requirements
– You have access to eBanking or eWealth of Zürcher Kantonalbank.
– You have the necessary powers of attorney.
– You use a software solution that is connected to the bLink platform from SIX.

OpenWealth Association
As a founding member, Zürcher Kantonalbank, together with other members, pursues the vision of defining, maintaining and further developing an Open API standard for a global wealth management community. Various banks, portfolio management systems and service providers are also members of the OpenWealth Association.

Information about the SIX bLink platform
With bLink, SIX offers financial institutions and software providers a platform for standardised interfaces. Participants connected to the platform can communicate with each other easily and securely. With a single interface connection, you receive your data from all participating banks.

Price
Use is free of charge, transactions are charged according to the price list or separate agreement.

Contact
For a consultation, please contact your relationship manager or call us on 0800 800 825.
